

Sustainability Services

Your sustainability partner

Our Sustainability Services team is highly experienced in providing specialist support across every built environment sector.

We take a holistic approach to sustainability, working in partnership with our clients at each project stage, from pre-acquisition to in-use and on into repositioning, for schemes of every type. From individual assets to international portfolios, we identify and address the core themes which matter to you and your stakeholders, all whilst ensuring compliance with the latest standards, legislation and certifications.

Supporting your Sustainability journey

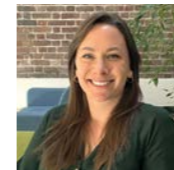

We understand that making a holistic assessment is crucial to delivering meaningful progress on your sustainability journey, and we ensure building performance, lifecycle carbon, responsible investment, material circularity, wellbeing, biodiversity, ethical supply chains and water efficiency are all considered throughout everything we do. As your sustainability partner, you can rely on us entirely. We work with you to formulate your brief and targets to futureproof your assets and help secure a brighter future for our planet.

Project Highlights

Our specialists are delivering exemplary projects across the UK and Ireland.

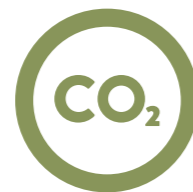

Strategic Sustainability

We are dedicated to unlocking the sustainability potential of your assets, projects, and business operations.

Sustainability frameworks & implementation support | Sustainable development brief | Sustainability Statements | Due diligence & peer review | Climate resilience | Ethical supply chain & environmental product declaration advice | Carbon offset guidance | SBTi compliance

Building Performance & Decarbonisation

Our specialists embed climate resilience within project designs, helping them respond to the climate emergency

Energy strategy for planning | Building Regulations compliance | Operational energy modelling TM54 & NABERS UK | Overheating & thermal comfort analysis | Whole life carbon assessment | CRREM reporting | Net Zero alignment & verification | Asset carbon tracking & intervention analysis | Heat network viability studies | Masterplan & portfolio decarbonisation strategies | In-use modelling & reporting

Building Circularity

Our circularity experts offer a full range of services to ensure you get the most from the materials within your existing or new assets, driving down embodied carbon and minimising waste.

Pre-redevelopment audit | Planning pre-demolition audit | Circular Economy Statement | Adaptability studies | Disassembly studies | Construction efficiency & material sourcing | Materials Passports guidance and deployment | Material reuse strategy support | Operational waste management plan | Site waste management plan

Building Certifications

Our in-house team is highly experienced in delivering sustainable building certifications across every sector.

BREEAM certifications | BREEAM Infrastructure certification | BREEAM Communities certification | BREEAM evidence reports | DREAM certifications | Home Quality Mark | WELL Building Standard certification | Fitwel certification | Passivhaus design
